16,000 Hz
sampling rate

A NEW HIGH PRECISION MICROMETER SYSTEM

AUTOMATICALLY CORRECTS FOR TARGET MISALIGNMENT AND VIBRATION

Compare against existing technology

The performance needed for 100% in-line measurement
KEYENCE's proprietary 3-CMOS x Green-LED measurement system

LS-9000 3-CMOS x Green-LED system

[Principle] Green-LED light is emitted as a uniform collimated beam. The CMOS detects the position of the edge between light and dark edges of the received light and calculates measured values.

Conventional Technology Laser scan micrometer system

[Principle] A semiconductor laser is fired at a rotating polygon mirror and scans through the measurement range. Measured values are calculated by measuring how long the laser is obstructed by the target

High-speed optical micrometer :
the LS-9000 Series

Large-diameter model
LS-9120M

Speed

Stability

Durability

With the LS-9000 Series

13.3 times faster than conventional systems
Fastest in its class

16000 Hz sampling rate

Fitted with a high-speed exposure CMOS and high-intensity Green-LED to produce a 16000 Hz sampling rate, far outstripping previous systems. Improves production line cycle times and ensures more stable measurement.

A world-first

Active Tilt and Vibration Correction

The high-speed exposure CMOS clearly recognizes measurement targets that suddenly move due to target vibration and corrects measurement errors. The monitor CMOS determines the alignment of the target to enable accurate measured values.

Low maintenance

No moving parts

Thanks to KEYENCE's proprietary optic design there are no moving parts. The use of a LED light source means no errors due to external sources. This combination of no moving parts with a LED light source means it can be used on-site for extended periods without requiring regular maintenance.

Problems with conventional systems

1200 Hz sampling

Motor speed must be increased to raise the sampling rate. However, it was hard to achieve both durability and stability, and the speed could not be dramatically increased.

Target alignment and vibration cause errors

Could not recognize tilting of the target due to only having one source of measurement data. Vibration in the target could also cause errors in the scan that lead to incorrect values.

Moving parts deteriorate

Regular calibration of the polygon mirror and laser was required due to the wear-related deterioration of moving parts.

Enhanced speed and accuracy

3-CMOS System

Three separate CMOS sensors provide advanced inspection capabilities

Even vibrating targets are measured stably

High-speed exposure is used so that a precise inspection of the target can be performed even if the target is vibrating, making accurate measurement possible.

...

High-speed CMOS

16000 Hz sampling

By integrating the peripheral circuits of the measurement CMOS into one chip, the S/N ratio has been dramatically improved and high-speed sampling achieved. For example, targets that move at 1000 m/min. can be measured at a pitch of around 1 mm 0.04° . Even parts that vibrate at high speeds can be measured stably.

Error in relation to vibrating workpieces

On an average of once, $\phi 1$ mm 0.04° pin gauges were vibrated and measured.

— LS-9006
— Conventional laser scanning system

Even misaligned parts are measured stably

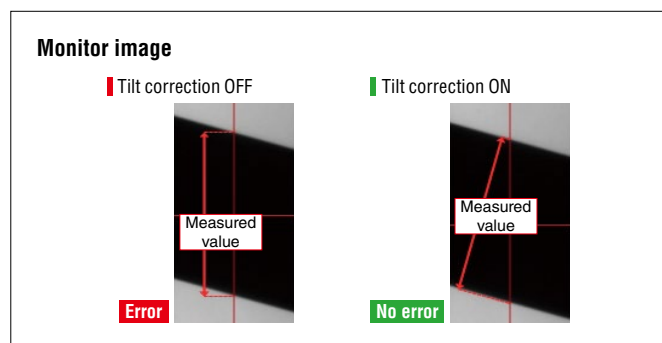

The target monitor CMOS recognizes the orientation of the part and adjusts the measured value so there are no measurement errors due to inclination.

Monitor CMOS

Alignment adjustment*1

Recognizes the misalignment of a workpiece from the image taken by the monitor CMOS. Inclination error is removed automatically and does not affect the measurement result. The captured image can also be checked with computer software so even novices will have no problem taking measurements.

*1 Functions of the LS-9006M and LS-9030M heads only.

Two axis target position indicator

The LS-9000 can use the target positioning CMOS receiver to determine the location of the measurement target in two axes. This makes installation and part position feedback simple, even with a single axis system.

Target positioning CMOS

Transmitter/receiver direction and position measurement*2

With the additional data obtained from the target positioning CMOS, the LS-9000 can determine the position of the target in both the X and Y axes.

*2 Functions of the LS-9006 (M) and LS-9030 (M) heads only.

Enhanced durability and reliability

High durability design

Constructed with no moving parts, a design that offers enhanced service life.

Huge reduction of maintenance time

With no motor to introduce wear and a long lifespan LED, minimal maintenance is required.

	LS-9000 Series	Existing systems
Motor durability	✓	×
Light source durability	✓	×

High-intensity Green-LED + high-efficiency condenser unit

Our proprietary wear-free construction

As a high intensity Green LED is used to generate the measurement beam, laser degradation typical with traditional systems is completely avoided. In addition, as the entire beam is generated with no moving parts, there is no motor or mirror system to wear out or replace.

Stable measurements in harsh environments

The effects of water, dust, and oil mist on the measurement value are eliminated.

IP67 construction + air purge unit

Best in class environmental resistance design*

The system enclosure maintains an IP67 rated protection for all internal components. In addition, the LS-9000 series heads come standard with a built in air purge mechanism to further enhance the system's resistance to environmental influence.

* The air purge unit is sold as an optional accessory only for the LS-9120M head.

Extreme resistance to shock and temperature drift

Revolutionary design eliminates the influence of shock and temperature fluctuations on the measurement value.

Die-cast housing + optical unit protection design

Hardened housing protects internal construction

The outer die-cast body has been mechanically isolated from the internal optical unit so that the outer body absorbs shocks and temperature variations, protecting the internal optics. Meets the IEC 68-2-29 standard (15 g/6 ms) for shock resistance.

Easy setup and analysis via a computer.

Computer software solves those "difficulties" in setting and measuring

Conventional measurement system

- Setting each device separately is time-consuming
- Original settings are easily lost
- Controller setup is complicated and hard to understand
- Difficult to verify measurement setup
- Needs a separate recorder to save data

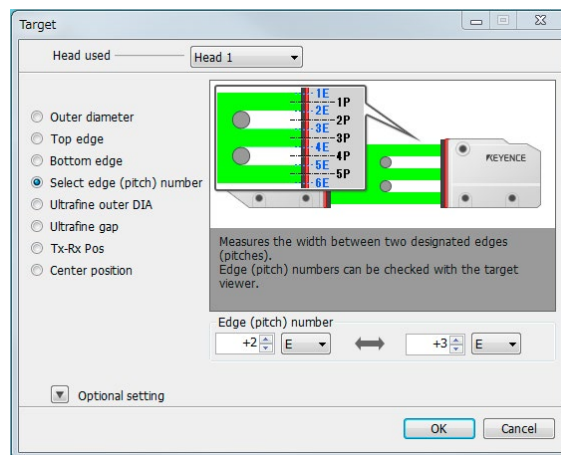

The LS-Navigator2 setup and diagnostics software simplifies and streamlines setup. (OPTIONAL)

Easy setting and backup

Easy visual setting

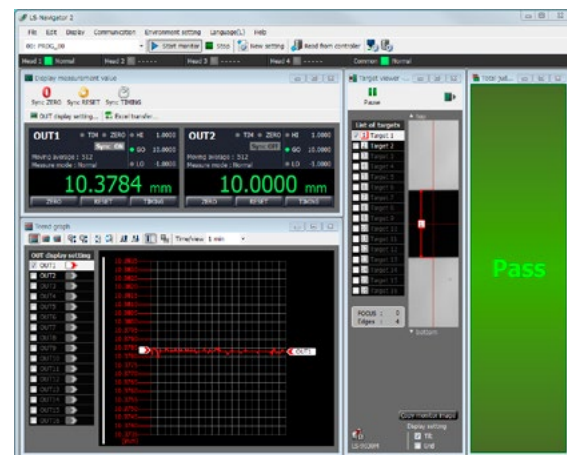

Measurement details can be selected from a picture, so settings are simple, even for a novice. Setting details are stored on the computer as backup files.

Customize your display

Multifunction measurement display

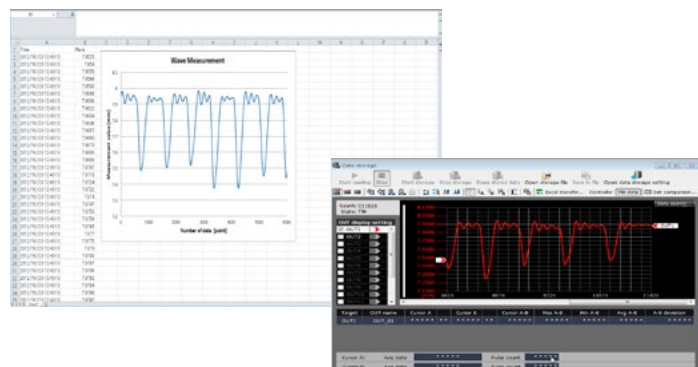

Support software features 12 independent display tools that let you customize your display. View any and all the information you need on a single screen to maximize efficiency.

Automatically record data

High-capacity data storage

With a storage capacity of 400,000 points, it is easy to record output data without external units. This data can then easily be exported to Excel.

New measurement functions that make previously unobtainable measurements easy

■ Ultra-thin outer diameter and ultra-thin gap measurement*

Specialized ultra-fine diameter / gap tool now allows measurement of gaps and diameters previously undetectable.

Measuring the outer diameter of an ultra-thin wire

Smallest detectable object

	Standard mode	Ultra-thin mode
6 mm 0.24" type	40 μm 0.0016"	10 μm 0.0004"
30 mm 1.18" type	300 μm 0.0118"	80 μm 0.0031"

* Functions of the LS-9006 (M) and LS-9030 (M) heads only.

■ 16-channel simultaneous measurement

With up to 16 simultaneous outputs, it is possible to measure any combination of diameters, position, gaps, etc. to meet your needs.

Measuring the outer diameter and runout of a photocopier roller

■ Irregular surface cancellation

Irregular surface cancellation allows for proper outer diameter inspection of parts with complex profiles such as key slots or D-cuts.

Measuring the outer diameter of a motor shaft

■ Transparent object/ two-level edge detection threshold value setting

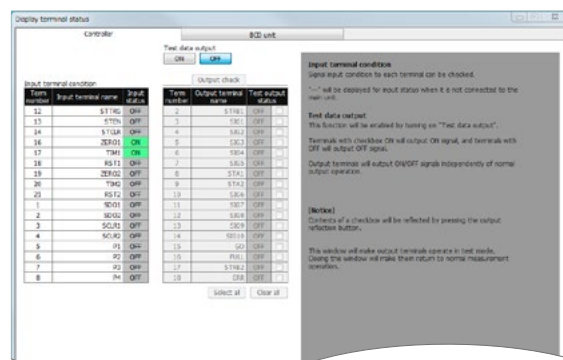

Using two-level threshold settings, it is possible to simultaneously measure two targets of differing transparency.

Taking dimensional measurements of transparent film and coating material

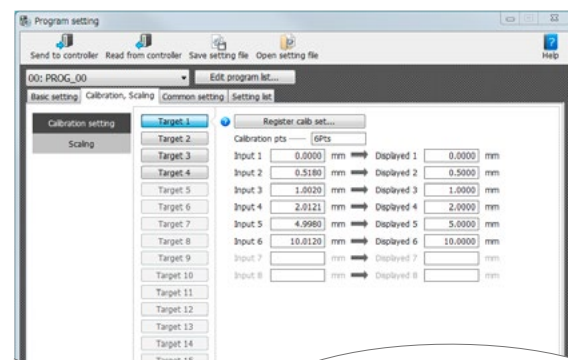

■ Terminal operation monitoring

Ability to monitor live terminal I/O status with manual test data output greatly simplifies setup and troubleshooting.

■ Multi-point calibration

Up to 8 points can be adjusted and scaled. Multiple targets of differing diameters can be measured more precisely.

Controller

A wide variety of interfaces to ensure easy integration

Controller **LS-9501 (P)**

A variety of I/O to suit on-site needs is a standard feature.

CPU	Core 2 Duo 2 GHz or more	
Memory capacity	2 GB or more	
L2 cache memory	2 MB or more	
Free space in hard disk	10 GB or more	
Display	XGA (1024 x 768 pixels) or more, 256 colors or more	
Interface	USB	USB 2.0 HI-SPEED supported (USB 1.1 Full-SPEED compatible) ^{*5}
	Ethernet	Ethernet 1000BASE-T/100BASE-TX ^{*6}

If you wish to use the send to Excel function, please check that one of the Excel versions listed below is installed on your computer.

Excel 2010 (32 bit/64 bit), Excel 2007, Excel 2003, Excel 2002

^{*1} Home, Pro, and Enterprise editions are supported.

^{*2} Home Premium, Professional, and Ultimate editions are supported.

^{*3} Ultimate, Business, Home Premium, and Home Basic editions are supported.

^{*4} Professional and Home editions are supported.

^{*5} Connection through a USB hub is not included in the guarantee.

^{*6} Connection to LAN and connection via a router is not included in the guarantee.

■ BCD output unit

Model	CB-BD100	
LED display		POWER-ON LED
Output terminal	BCD output ^{*1}	NPN open-collector output x 4 ports
	Strobe output	NPN open-collector output x 4 outputs
	OUT selection output	NPN open-collector output x 4 outputs
Input terminal	OUT selection input	Non-voltage input x 4 inputs
Power source	Supplied from the controller	
Rating	Current consumption	0.16 A max.
Environmental resistance	Ambient temperature	0 to +50°C 32 to 122°F
	Relative humidity	20 to 85% RH (no condensation)
Weight	800 g	

· Up to 1 unit can be connected to the controller.

· NPN open-collector output rating: 30 mA max. (30 V max.), residual voltage of 0.5 V max.

· Non-voltage input rating: ON voltage of 1 V max., OFF current of 0.6 mA max.

^{*1} Selectable from BCD output (29 bits, signed), binary output (25 bits, negative numbers are represented by the two's complement), and judgment output.

■ PROFINET unit

Model	CB-PN100	
Compatible network		PROFINET IO communication
Ethernet	Compliant standards	IEEE 802.3u ^{*1}
	Transmission speed	100 Mbps, full duplex (100BASE-TX)
	Transmission media	STP or Category 5e or higher UTP
	Maximum cable length	100 m 328.1'
PROFINET IO	Supported functions	Data I/O communication Record data communication
	Number of connectable PROFINET IO controllers	1
	Update time	2 ms to 2048 ms
	GSDML	Version 2.25
	Conformance class	Conformance Class A compliant
	Conformance test version	Based on Version 2.2.4
	Applicable protocol	LLDP, DCP
Power supply voltage		24 V ±10% (supplied from the controller unit of the laser scanner)
Current consumption		0.12 A max.
Weight		Approx. 470 g

^{*1} Although this unit conforms to IEEE 802.3u and can establish 100 Mbps full duplex communication using AutoNegotiation function, it does not have AutoCrossOver and AutoPolarity functions that are normally required for the PROFINET IO standard. Select a straight or cross cable according to the Ethernet port of the device to be connected.

■ Display and settings panel

Model	LS-D1000	
Display interface	Measured value display	Measured value display: 2 colors, 8 digits, 16 segments OUT number display: Monochrome, 2 digits, 7 segments Tolerance judgment display: HH, HI, GO, LO, LL. Monochrome Control status display: TIM, ZERO indicator. Monochrome
	Program number display	Monochrome, 2 digits, 7 segments
	Position monitor display	1D display: 2 colors, 32 levels 2D display: Monochrome, 7 x 7 matrix display
	Display update cycle	5 times/sec.
Operation input interface		Numeric keypad, function key, lock key timing input key, zero input key, reset input key, escape key, arrow keys (4)
Display and settings panel connection port		2
Power supply		Supplied from the controller
Rating	Current consumption	0.19 A max.
Environmental resistance	Ambient temperature	0 to +50°C 32 to 122°F
	Relative humidity	20 to 85% RH (no condensation)
Enclosure rating		IP65 (When panel attached, front surface only)
Weight		Approx. 400 g

■ EtherNet/IP® unit

Model	CB-EP100	
Compatible network		EtherNet/IP® and displacement sensor-specific protocols (socket communication)
Ethernet	Compliant standards	IEEE 802.3 (10BASE-T), IEEE 802.3u (100BASE-TX)
	Transmission speed	10 Mbps (10BASE-T), 100 Mbps (100BASE-TX)
	Transmission media	STP or Category 3 or higher UTP (10BASE-T), STP or Category 5 or higher UTP (100BASE-TX)
	Maximum cable length	100 m 328.1' (Distance between the unit and Ethernet switch)
	Maximum number of connectable hubs ^{*1}	4 hubs (10BASE-T), 2 hubs (100BASE-TX)
EtherNet/IP®	Supported functions	Cyclic communication (Implicit messaging), Message communication (Explicit messaging), Compatible with UCMM and Class 3
	Number of connections	64
	RPI	0.5 ms to 10000 ms (in 0.5 ms)
	Tolerable communication bandwidth for cyclic communication	6000 pps
	Message communication	UCMM, Class 3
Conformance test		Compatible with Version A9
Power supply voltage		24 VDC ±10%, including ripple (P-P) (supplied from the controller unit of the laser scanner)
Current consumption		0.12 A max.
Environmental resistance	Ambient temperature	0 to +50°C 32 to 122°F
	Relative humidity	20 to 85% RH (no condensation)
Weight		Approx. 470 g

^{*1} The number of connectable hubs is not limited when using a switching hub.
